

Two ways to run the next 45 days

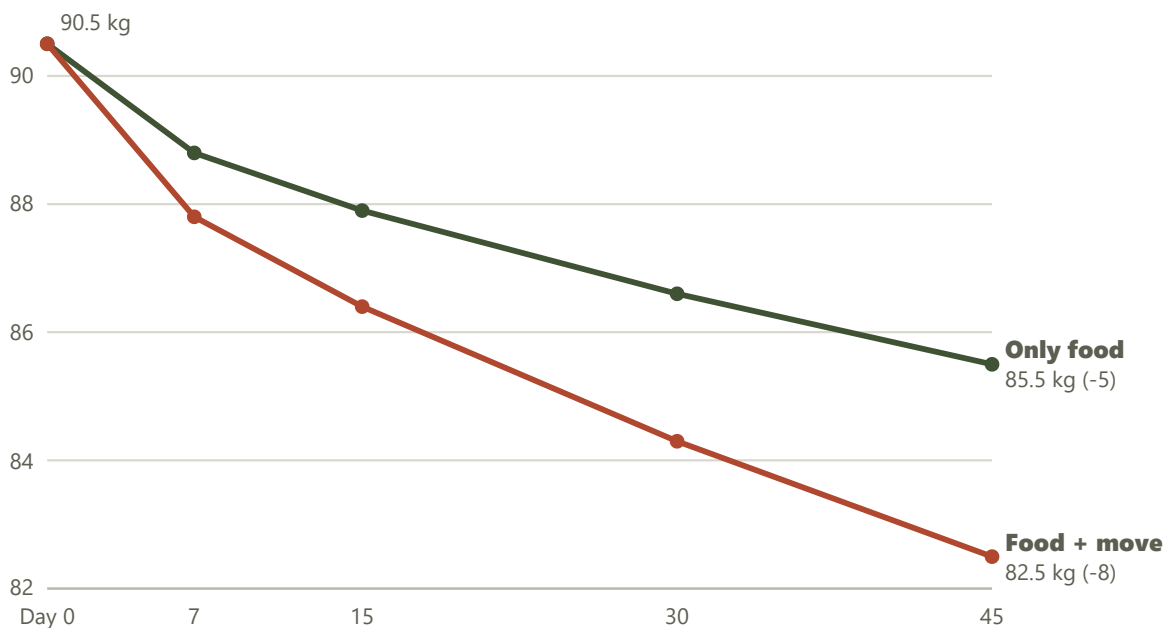

NOW **90.5 kg**

GOAL **75 kg**

TO LOSE **15.5 kg**

You are what you eat, so both ways start in the kitchen: you follow the meal plan either way, and **the food alone is already a strong lever**. The second way is the same plan **plus movement**: walks, a little strength, a couple of 16:8 days, and the fat comes off faster. The difference is movement, not eating less. Both keep your muscle when protein stays high, and week 1 drops fastest because of water.

WEIGHT ON THE SCALE OVER 45 DAYS · START 90.5 KG · GOAL 75 KG (THAT COMES LATER)

Relaxed: only the food

Movement	same as now (work)
Daily burn	~2,800 kcal
Eat	~2,200 to 2,300
Deficit	~500 to 600 / day
Fat loss	~0.5 kg / week

In 45 days: **~5 kg**

All gas: food + movement

Movement	+ strength 2-3x, daily walks, 2-3 days 16:8
Daily burn	~3,100 kcal
Eat	~2,000
Deficit	~1,100 / day (safe max)
Fat loss	~0.9 to 1.0 kg / week

In 45 days: **~8 kg**

The goal of 75 kg (the full 15.5 kg) is a 4 to 6 month job: these 45 days are the strong start. Week 1 drops fastest because of water and glycogen, not all fat, so trust the weekly average. Keep protein about 180 to 190 g a day and train 2 to 3 times a week, or the extra loss turns into muscle instead of fat. Do not eat below about 1,900 kcal: past that you lose energy for the site, not more fat. Faster comes from moving more, not eating less.
